

UFO REPORT FROM JAPAN

I am UFO researcher who lives in the center and Nara Prefecture Tenri City in the Japanese Islands. My name is Kiyoshi Amamiya 64 years old. I witnessed UFO three times near the market where it went shopping this year. However, it was not possible to take a picture. The 18th and 11:00AM of April, 2009. I went to the market. I shopped, and returned to the parking lot. The parking lot is an exclusive use of the bicycle and motor bicycle. When always shopping, I get on motor bicycle. When going to commuting and the distance, the car gets on.

Well, when I returned to the parking lot, and it put on a helmet in the head, the object like a big bird was seen in the sky. It turned by the direction and 40 degrees in the angle of the east. Then, it appeared in the air in there was no object another by another one.

The very thing body also participated in the turn. A and another object appeared in the air and it participated in the turn. Thus, it turned as three black, spatulate objects in total drew yen. The range was reached and existed in three fingers, that is, yen of three degrees in the angle. I measured the angle from ground to the object by the palm.

I put out the camera. And, [shatsuta-] was cut aiming at the object. The zoom of the camera was operated a little on the way of this operation. Perhaps, it presumes to have become an expansion of about 100mm. Two pieces disappeared suddenly in three turning objects. And, only one piece was seen to leave the straight line toward the east. The appearance was seen, "Flying saucer".

The photograph was taken without seeing the finder. Therefore, two objects reflected on the edge of the frame. Or, the frame.
